

# Daggerheart – GM Combat Cheat Sheet

## Hope & Fear Currency

Players roll Duality Dice (Hope d12 vs Fear d12).

If Hope > Fear → Player succeeds with hope and gains 1 Hope.

If Fear > Hope → GM gains 1 Fear, player still succeeds but with complication.

Fear tokens are not required to make adversaries act.

Fear is spent to fuel adversary special abilities, environmental effects, or scene-wide twists.

## Spotlight & Turns

Combat is spotlight-based, not rigid turns.

Players act until a Fear result or narrative shift passes spotlight to adversaries.

Optional: Use action tokens (~3 per PC) for tactical pacing if desired.

## Adversary Actions

Adversaries act normally when spotlight is on them.

Fear may be spent to trigger special adversary powers (e.g., stronger attacks, area effects).

Without Fear, adversaries can still attack, move, or press the fiction.

## GM Moves

On failed rolls or Fear results, the GM can:

- Inflict harm (damage, stress, consequences).
- Activate adversary abilities.
- Escalate the situation (reinforcements, hazards, worsening stakes).

Every roll changes the situation: Hope = triumph, Fear = complication, Failure = consequence.

## Quick Flow in Play

1. PC acts and rolls Hope vs Fear.
2. Resolve result (Hope success, Fear complication, or failure).
3. Adjust Hope/Fear tokens.
4. Spotlight shifts → another PC or adversary.
5. GM spends Fear only to escalate with powers or moves, not to activate adversaries.
